

## Faculty Review of Open eTextbooks

The [California Open Educational Resources Council](http://www.cool4ed.org) has designed and implemented a faculty review process of the free and open eTextbooks showcased within the California Open Online Library for Education ([www.cool4ed.org](http://www.cool4ed.org)). Faculty from the California Community Colleges, the California State University, and the University of California were invited to review the selected no/low cost and open eTextbooks using a rubric. Faculty received a stipend for their efforts and funding was provided by the State of California, the William and Flora Hewlett Foundation, and the Bill and Melinda Gates Foundation.

### Overall Comments

If you were to recommend this textbook to colleagues, what merits of the textbook would you highlight?

- The depth of the material, the innovative instructional design (the textbook really does achieve its goal of explaining theory using applications, which its authors should be praised for).
- The clear and engaging writing.

What areas of this textbook require improvement in order for it to be used in your courses?

- The book might be too challenging for a standard principles course.
- Also, there is a lack of key terms and definitions, because the authors try to build up everything through their "application-first" approach.
- These facts could place some burdens on the instructor to develop a lot of instructional material by him/herself.

The student must also commit to a lot of reading (re: my "too challenging" comment).
